

## **XPage Business Card Controls**

License: Apache License v2  
Last version: 12/09/09  
Author: Niklas Heidloff (IBM), Steve Castledine (IBM)  
Platform: Tested on Lotus Domino 8.5.1 and Firefox 3.5.5

### **Description**

This project contains two XPage custom controls that can easily be used in custom applications to bring up the IBM Lotus Connections business card.

## How to run and try the navigator

Notes client:

- Copy Business.nsf from Business.zip in your Notes data directory (e.g. c:\notes\data)
- Open Business.nsf in Domino Designer
- Select XPage 'TestInline' and invoke the menu action 'Design-Preview in web browser-Default browser'

Domino server:

- Copy Business.nsf from Business.zip in your Domino data directory (e.g. c:\domino\data)
- Open Business.nsf in Domino Administrator and sign the database
- Open a web browser and navigate to the 'TestInline' XPage (e.g. http://localhost/Business.nsf/TestInline.xsp)

## How to re-use control in custom application

Copy the following design elements from Voting.nsf in your nsf or ntf:

- Custom control: ccInlineBusinessCard
- Custom control: ccPopUpBusinessCard

### Custom control: ccPopUpBusinessCard

This control allows clicking on the underlying person name to bring up the business card as pop up dialog.

<i>Property name</i>	<i>Type</i>	<i>Default</i>	<i>Description</i>	<i>Sample value</i>
connectionsServer	string	""	URL to Lotus Connections server	"http://www.bleedyellow.com"
personDisplayName	string	""	Person display name	"Niklas Heidloff"
personEmailAddress	string	""	Person email address	"niklas_heidloff@de.ibm.com"

## Custom control: ccInlineBusinessCard

This control shows a mini inline business card which can be expanded.

<i>Property name</i>	<i>Type</i>	<i>Default</i>	<i>Description</i>	<i>Sample value</i>
<code>connectionsServer</code>	string	""	URL to Lotus Connections server	<code>"http://www.bleedyellow.com"</code>
<code>personDisplayName</code>	string	""	Person display name	<code>"Niklas Heidloff"</code>
<code>personEmailAddress</code>	string	""	Person email address	<code>"niklas_heidloff@de.ibm.com"</code>
