

OPENNTF WEBINARS

April 20, 2023 OpenNTF Webinar:

Getting to Know Domino REST API

AGENDA

- Welcome
- Presentation
Paul Withers
- Q and A

THANKS TO THE OPENNTF SPONSORS

- HCL made a contribution to help our organization
 - Funds these webinars!
 - Contests like Hackathons
 - Running the organization
- Prominic donates all IT related services
 - Cloud Hosting for OpenNTF
 - Infrastructure management for HCL Domino and Atlassian Servers
 - System Administration for day-to-day operation

THIS IS OUR COMMUNITY

- Join us and get involved!
- We are all volunteers
- No effort is too small
- If your idea is bigger than you can do on your own, we can connect you to a team to work on it
- Test or help or modify an existing project
- Write guides or documentation
- Add reviews on projects / stars on Snippets

UPCOMING EVENTS

- Engage User Group Meeting
The Future is NOW
April 24-26
Felix Meritis
Amsterdam, Netherlands
- Collabsphere - MWLUG
 - In Person!
 - August 30 and 31
 - Chicago Botanical Garden

DEVELOPER REPAIR CAFE

- Bring your topic!
- Discuss ideas on how to tackle the issue
- Live at Engage on April 26 at 5:00 PM CET

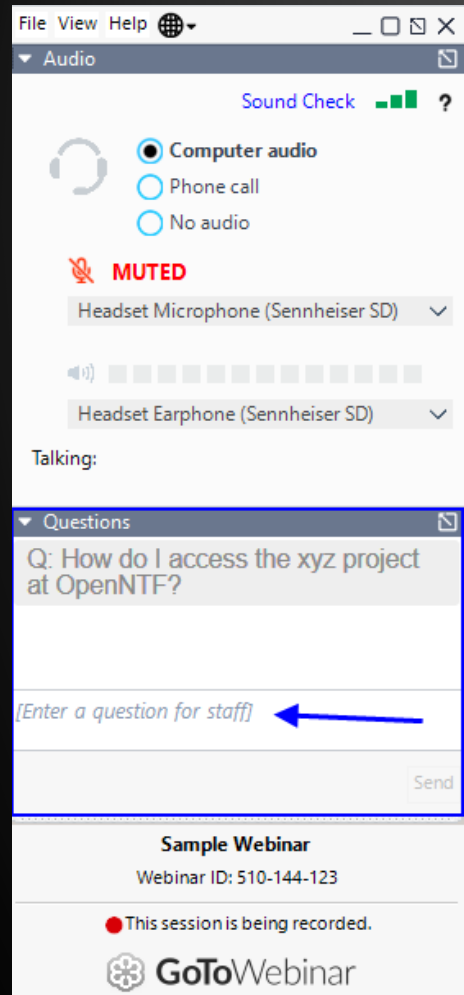

NEXT WEBINAR

May 18 Webinar:

Java Collections, Maps and Streams

Paul Withers

ASKING QUESTIONS

- First Question – Will this be recorded?
 - Yes, view on YouTube!!!
 - <https://www.youtube.com/user/OpenNTF>
- Use the Questions Pane in GoToWebinar
- We will get to your questions at the end of the webinar
- The speakers will respond to your questions verbally
 - (not in the Questions pane)
- Please keep all questions related to the topics that our speakers are discussing!!!
- Unrelated Question => post at:
 - <https://openntf.org/discord>

PRESENTATION

Getting to Know Domino REST API

HCLSoftware

Overview and Design Goals

The challenge

Domino is a world-class **NoSQL** database (The first commercial > 30 years ago). It tightly-couples UI and data with business logic in @Formula language, LotusScript & Java. Domino provides excellent security with per-database access control and its unique declarative access to read and write protection.

AND

Applications written in any system, tooling and platform need secure, standard compliant access to Domino data: Angular, Spring, ReactJS, NodeJS, Volt MX, Command line tools, Middleware & [insert-your-favorite]

Design Goals

Access

Platform agnostic
Any language
Maintain security

Data

Schema
OData
Translation from/to Native

Documentation

API first (Swagger)
User contribution

HCLSoftware

Domino REST API and Standards

Domino and Open Standards

Domino	Open Standard
Documents	JSON
NRPC	HTTPS
No Schema	JSON schema OData
NotesID	Access Token

* Many more

Domino vs. JSON & JSON schema

- Text
 - Names
 - Readers

 - binary

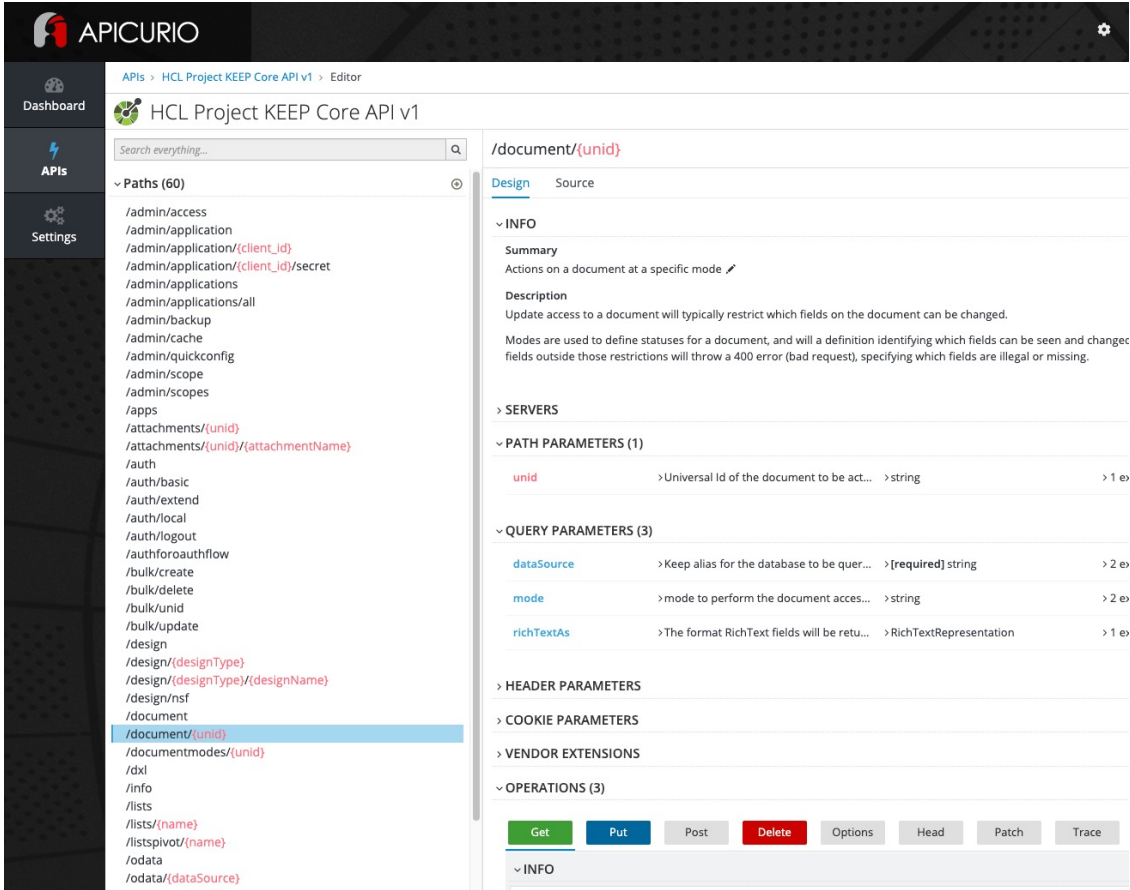

*Multivalue

... and others

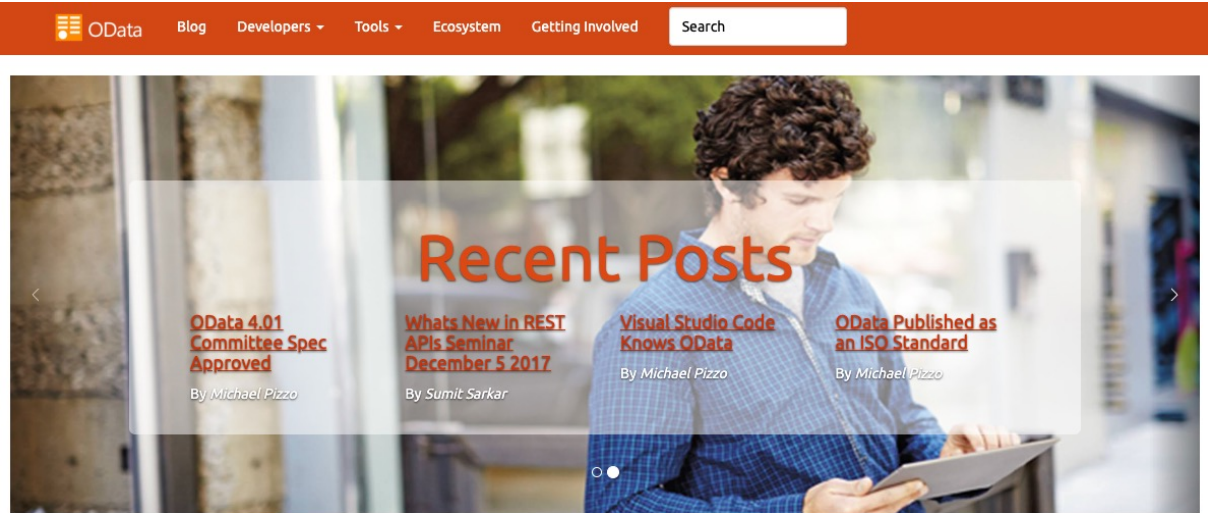

data <small>CRUD of Domino NoSQL data in JSON format. Workhorse APIs, used by applications to operate</small>			^
POST	/attachments/{unid} Creates a new attachment in an existing document	createDocumentAttachment	✓ 🔒
DELETE	/attachments/{unid}/{attachmentName} Removes an attachment	deleteDocumentAttachment	✓ 🔒
GET	/attachments/{unid}/{attachmentName} Retrieve a document's attachment	getDocumentAttachment	✓ 🔒
POST	/bulk/create Create multiple documents in a single call	bulkCreateDocuments	✓ 🔒
POST	/bulk/delete Delete multiple documents in a single call	bulkDeleteDocuments	✓ 🔒
POST	/bulk/unid Retrieve multiple documents in a single call by unid	bulkGetDocumentsByUnid	✓ 🔒
PATCH	/bulk/update Update multiple documents in a single call	bulkUpdateDocumentsByQuery	✓ 🔒
POST	/document Create a new document for a specified form.	createDocument	✓ 🔒
DELETE	/document/{unid} Delete the given document	deleteDocument	✓ 🔒
GET	/document/{unid} Retrieve a given document at its appropriate mode	getDocument	✓ 🔒
PATCH	/document/{unid}	patchDocument	✓ 🔒
PUT	/document/{unid} Perform an update on the document at the relevant mode	updateDocument	✓ 🔒
GET	/documentmodes/{unid} Returns the modes available and fields that can be edited	getDocumentFormModes	✓ 🔒
GET	/lists Provide information on available views/folders	fetchViews	✓ 🔒
GET	/lists/{name} Pulls in view data	fetchViewEntries	✓ 🔒
GET	/listspivot/{name} Processes view data as pivot	pivotViewEntries	✓ 🔒

apicur.io & OData

OData

OData (Open Data Protocol) is an [ISO/IEC approved, OASIS standard](#) that defines a set of best practices for building and consuming RESTful APIs. OData helps you focus on your business logic while building RESTful APIs without having to worry about the various approaches to define request and response headers, status codes, HTTP methods, URL conventions, media types, payload formats, query options, etc. OData also provides guidance for tracking changes, defining functions/actions for reusable procedures, and sending asynchronous/batch requests.

OData RESTful APIs are easy to consume. The OData metadata, a machine-readable description of the data model of the APIs, enables the creation of powerful generic client proxies and tools.

Welcome to HCL Domino REST API documentation

HCL Domino REST API provides a secure REST API with access to HCL Domino servers and databases while running on HCL Domino and HCL Notes on Windows, Linux, and Mac. Designed to re-establish Domino as a world class, modern, standards-compliant, cloud native and enterprise-level collaboration platform, it adds contemporary REST APIs to Notes and Domino, enabling a modern programming experience with the tools of your choice. For more information, see [Introducing Domino REST API](#).

Identity Provider and Security

Domino REST API contains an OAuth compliant IdP

- Use JWT for access tokens
- Use Domino as IdP
- Bring your own IdP

```
{
  "response_types_supported": [
    "code",
    "token"
  ],
  "token_endpoint_auth_methods_supported": [
    "client_secret_post",
    "client_secret_basic",
    "none"
  ],
  "grant_types_supported": [
    "authorization_code",
    "refresh_token"
  ],
  "issuer": "https://acra.projectkeep.io",
  "authorization_endpoint": "https://acra.projectkeep.io/oauth/authorization",
  "token_endpoint": "https://acra.projectkeep.io/oauth/token",
  "scopes_supported": [
    "MAIL",
    "$DATA",
    "$DECRYPT",
    "Domino.user.all",
    "openid",
    "email",
    "keepconfig"
  ],
  "jwks_uri": "https://acra.projectkeep.io/.well-known/jwks.json",
  "userinfo_endpoint": "https://acra.projectkeep.io/api/v1/userinfo"
}
```

Permission dialogue

Permission Requested

The **Project Castle** application is requesting permission to access your account
doctor.notes@projectkeep.io

This will allow the **Project Castle** application to access the following HCL Domino
applications and resources:

\$DATA
Any Domino
database you have
access to

Deny

Allow

Specific Access

- **Domino REST API Admins (Scopes and OAuth)**
 - LocalKeepAdmins group
 - Editor Access to KeepConfig.nsf
- **Domino Developers (Schemas)**
 - Designer access to relevant NSF
 - Reader access to KeepConfig.nsf
- **Functional Accounts**
 - Management Console (Port 8889), Metrics (Port 8890), Health Check (Port 8886)
 - Stored in keepconfig.d/functionalUsers.json
 - secret = salted and encrypted password retrieved from Management Console

Actually....

Try it out - now
