

OPENNTF WEBINARS

April, 2022 OpenNTF Webinar

What's New in Domino Designer

AGENDA

- Welcome – Howard Greenberg and Graham Acres
- Presentation – Ulrich Krause, midpoints GmbH
- Q and A - All

THANKS TO THE OPENNTF SPONSORS

- HCL made a contribution to help our organization
 - Funds these webinars!
 - Contests like Hackathons
 - Running the organization
- Prominic donates all IT related services
 - Cloud Hosting for OpenNTF
 - Infrastructure management for HCL Domino and Atlassian Servers
 - System Administration for day-to-day operation

HCL NOTES UI CONTEST

- OpenNTF is co-sponsoring HCL Notes UI Contest with GroupWave
- The new application should work within **Notes Client V12.0.1 and Nomad** for mobile devices (both iOS and Android)
- Entries will be judged on usability, compatibility, and technical design
- The jury consists of HCL Ambassadors and HCL employees
- Winners announced at Engage in May!
- More info at <https://www.groupwave.be/contest/>

THIS IS OUR COMMUNITY

- Join us and get involved!
- We are all volunteers
- No effort is too small
- If your idea is bigger than you can do on your own, we can connect you to a team to work on it
- Test or help or modify an existing project
- Write guides or documentation
- Add reviews on projects / stars on Snippets

OPENNTF BOARD UPDATES

- Community Projects
 - Catalog of User Group Presentations
 - Led by Oliver Busse
 - Channel on slack.openntf.com #presentation-project
- The Future of OpenNTF
 - How to Evolve OpenNTF
 - We want your input!
 - Blog and video posted soon
 - Feedback via Discord

UPCOMING EVENTS

- Engage 2022 – Bruges, Belgium – **NOW** May 23-25, 2022
 - <https://engage.ug/>

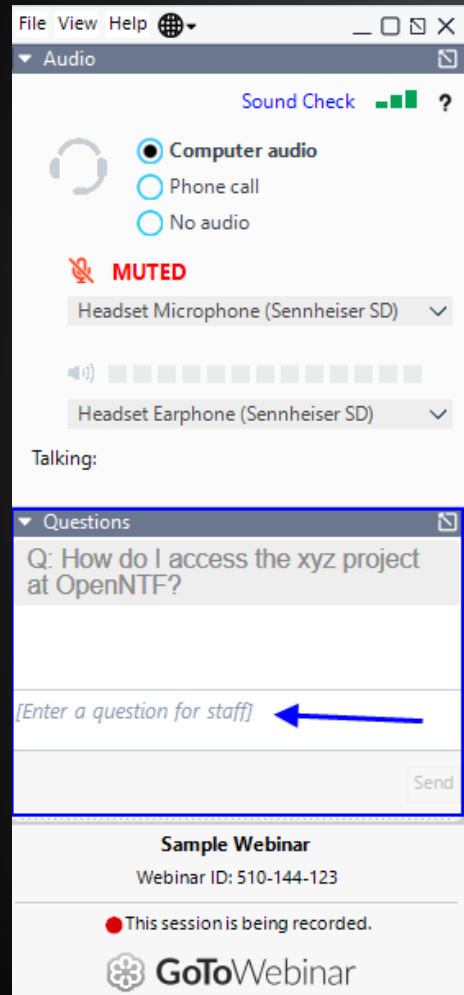

NEXT WEBINAR – ONE TOUCH SETUP

- Watch <https://www.openntf.org/webinars> for more information
- June: OpenNTF Annual General Meeting

ASKING QUESTIONS

- First Question – Will this be recorded?
 - Yes, view on YouTube!!!
 - <https://www.youtube.com/user/OpenNTF>
- Use the Questions Pane in GoToWebinar
- We will get to your questions at the end of the webinar
- The speakers will respond to your questions verbally
 - (not in the Questions pane)
- Please keep all questions related to the topics that our speakers are discussing!!!
- Unrelated Question => post at:
 - <http://openntf.slack.com/>

WHAT'S NEW IN DOMINO DESIGNER

Ulrich Krause

What is new in Domino Designer

Ulrich Krause, midpoints GmbH, openntf 04/2022

Lotus, IBM, HCL Notes und Domino since 1993

Developer / Administrator / Consultant

IBM Champion 2010 - 2019

HCL Ambassador 2019 - 2022

Let's Encrypt For Domino (LE4D)

About NotesPeek

Version 1.53 beta, edit 898, for Notes R6, Sep 26 2002 *

NotesPeek is graphical viewer of technical Notes information based on the Notes API containment hierarchy.

Current with Notes API 6.0.

Check for the latest NotesPeek revision: www.notes.net/notespeek

The screenshot shows the 'Design Synopsis on Local' application. The left sidebar has a 'Design Synopsis on Local' header with a gear icon and a section titled 'All Design Elements' with a dropdown arrow. Below this are three filter options: 'By Application', 'By Element Type', and 'Flat'. The main area displays a tree view of design elements. The 'compare' folder is expanded, showing a list of elements with their titles and last modified dates.

You can use “Database Comparison” to generate a design synopsis of a database that is exported to another database.

The target database contains documents describing each design element.

                    doc = db.createDocument();

                    doc.replaceItemValue("Form", FORM);
                    doc.replaceItemValue("firstName", faker.address().firstName());
                    doc.replaceItemValue("lastName", faker.address().lastName());
```

Java Faker is a port of Ruby's faker that generates fake data.

It's useful when you're developing a new project and need some pretty data for showcase.

DOTS (Domino OSGI Tasklet Service)

37

VOTE

Bring back DOTS support

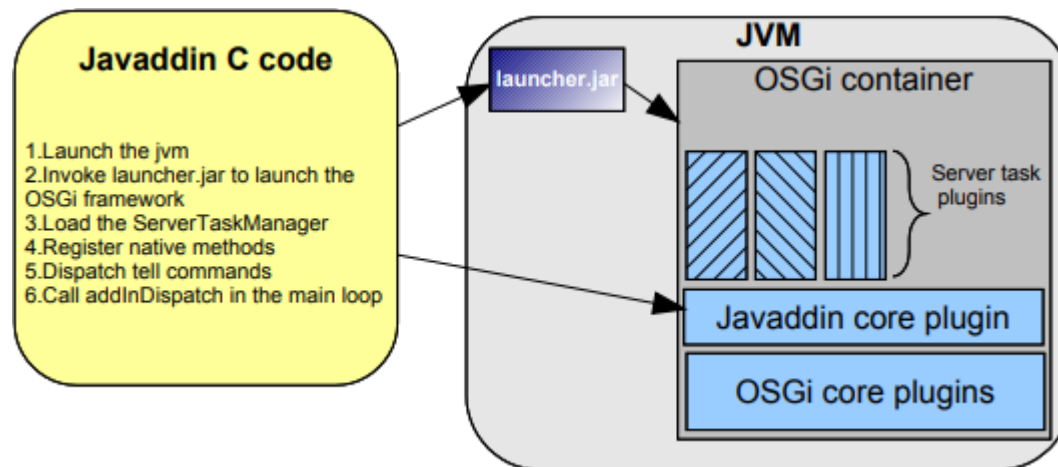

DOTS was an important addition in the panorama of the scheduled processes fo Domino.True, it was cumbersome to have to install the Social Component in order to have DOTS task but overall it was a "breath of decent fresh air". Considered the power ...

A look in the rearview mirror

... Domino V10.x / 11.x

NotesHTTPRequest,

The new **LotusScript** class allows HTTP requests to web servers. For more information, see the section LotusScript Classes A - Z in the IBM Domino Designer Basic User Guide and Reference.

Domino Query Language (DQL)

Is a new facility that runs in Domino core that allows for a terse, shorthand syntax for finding documents according to a wide variety of complexity of terms.

It leverages existing design elements without the need to write detailed code to access them.

DQL can be executed in the **LotusScript** and **Java Query** method on the **(Notes) Database** object or via the **domino-db node.js API**.

For more information, see the Domino Query Language documentation, currently under https://help.hcltechsw.com/dom_designer/10.0.1/basic/dql_overview.html

NotesRichTextItem,

New method **convertToHtml** to convert a RichTextItem to an HTML string

After this method is called, the **getHTMLReferences** method can be called.

The **HTMLReference** class was created to represent the data contained within an HTML reference

S

Domino AppDev Pack

A server-side component called **Proton**. An administrator installs and configures Proton on one or more Domino servers.

A Node.js module called **domino-db**. A developer adds this module to a Node.js application. domino-db uses Proton to perform bulk operations on documents in a server database. domino-db uses the Domino Query Language (DQL) to select target documents for most operations.

A Node.js based service called **IAM** (Identity and Access Management). An administrator can deploy it aside Domino to enable remote applications to access Domino resources through RESTFul APIs with standard **OAuth2.0** authorization flows. It is a Preview feature.

For details, see the App Dev Pack documentation.

<https://doc.cwpcollaboration.com/appdevpack/docs/en/homepage.html>

New or enhanced LotusScript and Java classes

The **NotesHTTPRequest** LotusScript class, introduced in release 10.0, supports additional methods and properties.

A new class, **DominoQuery**, is used to compile, tune, and run Domino Query Language queries. Available for **LotusScript** and **Java**.

The following new **LotusScript** classes support JSON: **NotesJSONArray**, **NotesJSONElement**, **NotesJSONNavigator**, and **NotesJSONObject**.

What is new in Domino Designer V 11.x

New properties to support Domino -based mobile clients such as HCL Nomad

New LotusScript classes **NotesGPS** and **NotesGPSPosition**

New methods and properties for **NotesJsonNavigator**, **NotesJsonArray**, **NotesJsonObject** classes

New methods for **(Notes)DominoQuery** classes

New properties for **NotesViewColumn** class

Domino Query Language enhancements.

    MsgBox reg.Contactnoteid  
  
End Sub
```

reg.RegisterNewUser does not return contactNoteId

Mike O'Brien HCL: „I see that it could be convenient to have it be returned after registering a brand new person.

Thanks, we will look into this.”

Create Empty Document Collection (supported)

NotesDatabase

```
...()  
CreateDocumentCollection()  
...()
```

Returns an empty document collection.

Available since V8

Undocumented since V8

Supported & documented as of V 11.0.1

Leere NotesDocumentCollection erzeugen: db.CreateDocumentCollection

« am: 06.01.12 - 09:56:51 »

Ab Notes 8 gibt es eine einfache Möglichkeit, eine leere NotesDocumentCollection zu erzeugen:

```
Dim coll As NotesDocumentCollection  
if db.IsOpen Then  
Set coll = db.CreateDocumentCollection  
end if
```

Gruß
Andreas

<https://atnotes.de/index.php/topic,53402.0.html>

New optional parameter “maintainOrder”

NotesViewEntryCollection

```
...()  
intersect(collection: Variant, maintainOrder: boolean)  
subtract(collection: Variant, maintainOrder: boolean)  
...()
```

(Optional) Boolean **maintainOrder**.

Specifies that after the intersect / subtract operation is complete, whatever order the originating view was in when the NotesEntryCollection was created will remain in force for subsequent entry processing.

That is, either the default view order will be used or that last set by calling **view.resortView**.

New optional parameter "maintainOrder"

CreateIndex()
Execute()
Explain()
ListIndexes()
Parse()
RemoveIndex()
ResetNamedVariables()
SetNamedVariable()

LotusScript / Java class to compile, tune, and run Domino Query Language queries.

Do not create manually. Use **dql.createIndex(viewName, field)**

Omit the optional parameters *IsVisible* & *Nobuild*

Programmatically update if needed (**dql.removeIndex()** & **dql.createIndex()**)

Check with **dql.listIndexes()**

Use a **prefix** to identify the views/indexes for use with DQL & to avoid conflict with existing views.

10

VOTE

Add namespace property to (Notes)DominoQuery class

When working with DQL, best practice is to create/update/remove indexes programmatically using their according methods.

To avoid conflicts with existing views of the same name, all indexes created should have a prefix.

<https://domino-ideas.hcltechsw.com/ideas/DDXP-I-818>

```
Dim dql As NotesDominoQuery
Set dql = db.Createdominoquery()

Set dql.namespace = "dql1_"

Call dql.Createindex("idxBySubject" , "Subject" )
```

Create Views For DQL

```
Public Class DqlIndexHelper

CREATE INDEX operation of Index domino_camp22 on ec11.nsf SUCCEEDED

listIndexes()

Lists the indexes that are optimized for Domino DQL query terms.

Results are returned in JSON format, with the following structure:

Columnref is whether DQL *'viewname'.columnname* syntax can be used with the field and

Fieldref is whether the *field name* can be used directly in DQL terms.

```
{
  "DBName": "dev\\ordwrk2.nsf",
  "Indexes": [
    {
      "Indexname": "All",
      "Columnname": "Sales_person",
      "Columnref": true,
      "Fieldref": true
    },
    ...
  ]
}
```

listIndexes()

```
Dim session As New NotesSession
Dim db As NotesDatabase
Set db = session.currentDatabase
```

```
Dim indexHelper As New DqlIndexHelper()
Set indexHelper.database = db
```

```
Call indexHelper.listAllIndexes()
```

    Set doc = Nothing
End Function
```

```
Set httpreq = session.CreateHTTPRequest()
httpreq.PreferJSONNavigator = True
Call httpReq.Setheaderfield(_
    "Authorization", "Basic " + _
    EncodeBase64 (user + ":" + password))

Set jsonNav = httpreq.get(URL)
```

<http://blog.nashcom.de/nashcomblog.nsf/dx/dominov10-http-requests-from-Lotus-Script.htm>

```
' V 10.0.1
Dim session As New NotesSession
Dim httpreq As NotesHTTPRequest
Dim jsonNav As NotesJSONNavigator
Dim response As Variant

Set httpreq = session.CreateHTTPRequest()
response = httpreq.get(url)

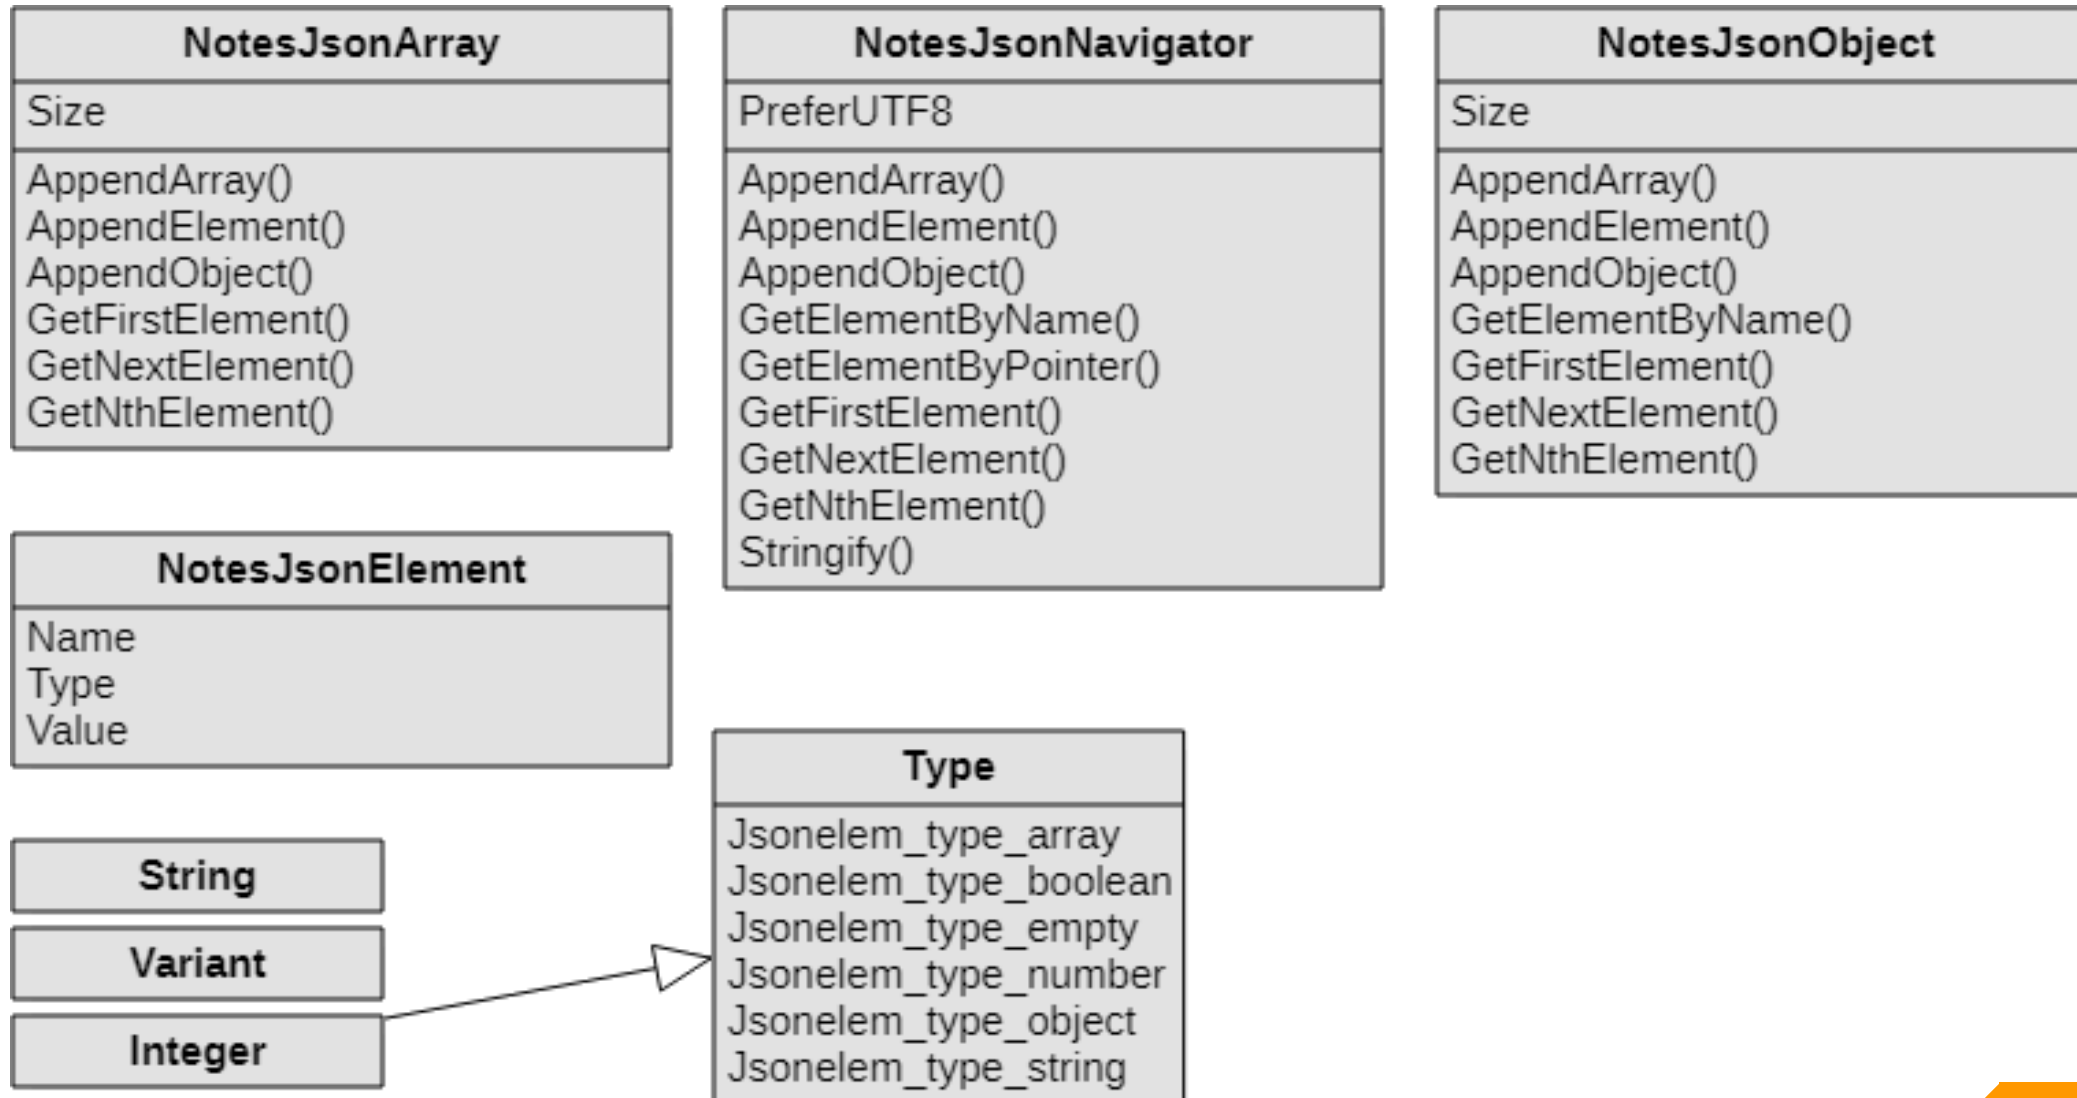

Set jsonNav = session.CreateJSONNavigator(response)

' V 10.0.1 FP2
Dim session As New NotesSession
Dim httpreq As NotesHTTPRequest
Dim jsonNav As NotesJSONNavigator

httpreq.PreferJSONNavigator = True
Set jsonNav = httpreq.get(url)
```

In the 10.0.1 FP2 release of Notes/Domino two new properties were introduced in the NotesHTTPRequest class: PreferUTF8 and PreferJSONNavigator. We are not going to change the default behavior, so if you are fine using the class as it is in a previous release you may continue.

However, if you have experienced any of the issues mentioned in the KB article, it is recommended to start setting **PreferJSONNavigator = True** before making your request.

```
Set g_nav = g_session.Createjsonnavigator( "")  
Set g_nav = g_session.Createjsonnavigator( "[ ] ")  
Set g_nav = g_session.Createjsonnavigator(colors)  
g_agentLog.logAction(g_nav.Stringify())
```

CreateJsonNavigator(„“) creates an empty **JsonObject**

CreateJsonNavigator(„[]“) creates an empty **JsonArray**

```
{  
  "colors": [  
    {  
      "color": "black",  
      "category": "hue",  
      "type": "primary",  
      "code": {  
        "rgba": [255,255,255,1],  
        "hex": "#000"  
      }  
    },  
    {  
      "color": "white",  
      "category": "value",  
      "code": {  
        "rgba": [0,0,0,1],  
        "hex": "#FFF"  
      }  
    }  
  ]  
}
```

```
Set g_nav = g_session.Createjsonnavigator( "" )
```

```
Call g_nav.Appendelement( "LotusScript" )
```

```
Call g_nav.Appendelement( "Java" )
```

```
Call g_nav.Appendelement( "c/c++" )
```

```
{  
  "":"LotusScript",  
  "":"Java",  
  "":"c/c++"  
}
```

```
Set g_nav = g_session.Createjsonnavigator( "[]" )
```

```
Call g_nav.Appendelement( "LotusScript" )
```

```
Call g_nav.Appendelement( "Java" )
```

```
Call g_nav.Appendelement( "c/c++" )
```

```
[  
  "LotusScript",  
  "Java",  
  "c/c++"  
]
```

Type property is **read-only** and cannot be set. Use this code as a workaround.

```
Set g_nav = g_session.Createjsonnavigator("")
Call g_nav.Appendelement("Ulrich", "firstName")
Call g_nav.Appendelement("Krause", "lastName")
Call g_nav.Appendelement("62", "age")
Call g_nav.Appendelement(True, "developer")
```

```
Dim el As NotesJSONElement
Set el = g_nav.Getelementbyname("age")
```

```
Dim oldValue As String
oldValue = el.value
el.value = CInt(oldValue)
g_agentLog.logAction(g_nav.Stringify())
```

```
{
  "firstName": "Ulrich",
  "lastName": "Krause",
  "age": 62,
  "developer": true
}
```

```
Set g_nav = g_session.CreateJSONNavigator(_

code/rgba/3: 1

New in Domino Designer 12.0.0

What new in Domino Designer 12.0?

The following features are new in HCL Domino Designer 12.0.1.

Transaction methods for LotusScript and Java Database classes

New LotusScript and Java methods are provided for the Database class to record database transactions.

Use formula Language in DQL search terms

In HCL Domino® 12, Formula Language can be used in Domino Query Language (DQL) search terms.

NotesQueryResultsProcessor class

This new LotusScript and Java class aggregates, computes, sorts, and formats collections of documents across any set of Domino databases.

XPages support for Bootstrap 4

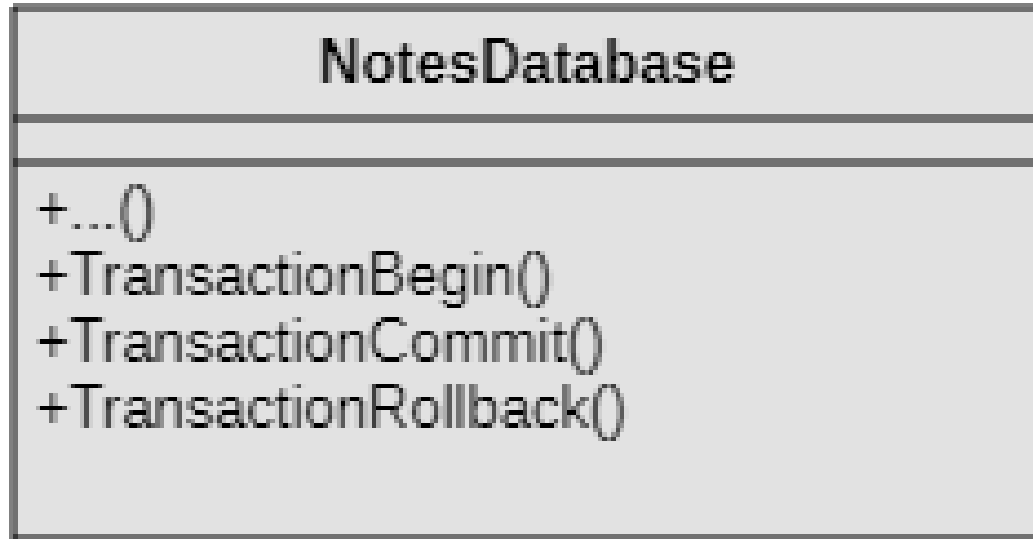

The XPages Extension Library now supports Bootstrap version 4.4.1.

Hide columns or fields from smaller-resolution screens

The new `onSize` event, `@RelayoutWindow` command, and `@ResolutionWidth` and `@ResolutionHeight` formulas allow you to hide columns and fields when they are displayed in smaller-resolution screens.

Column properties in narrow views honored in Notes

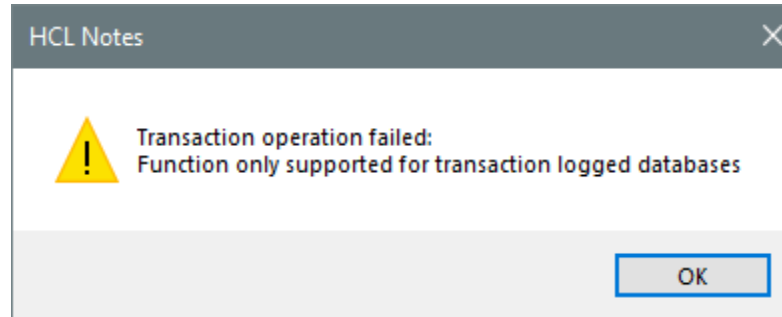

Column properties associated with narrow views specified in HCL Domino® Designer are now honored in HCL Notes® applications.

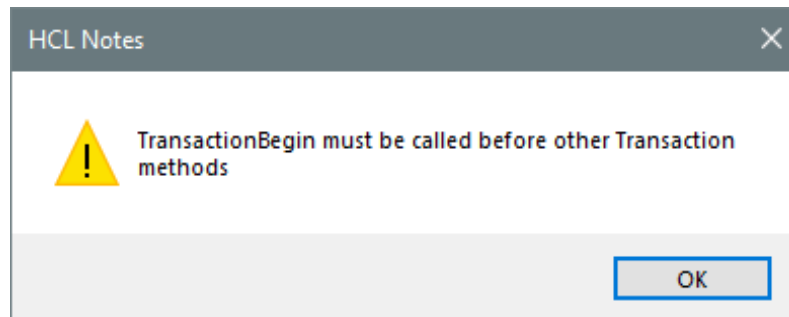

New LotusScript and Java methods are provided for the Database class to record database transactions

Transaction methods for LotusScript and Java

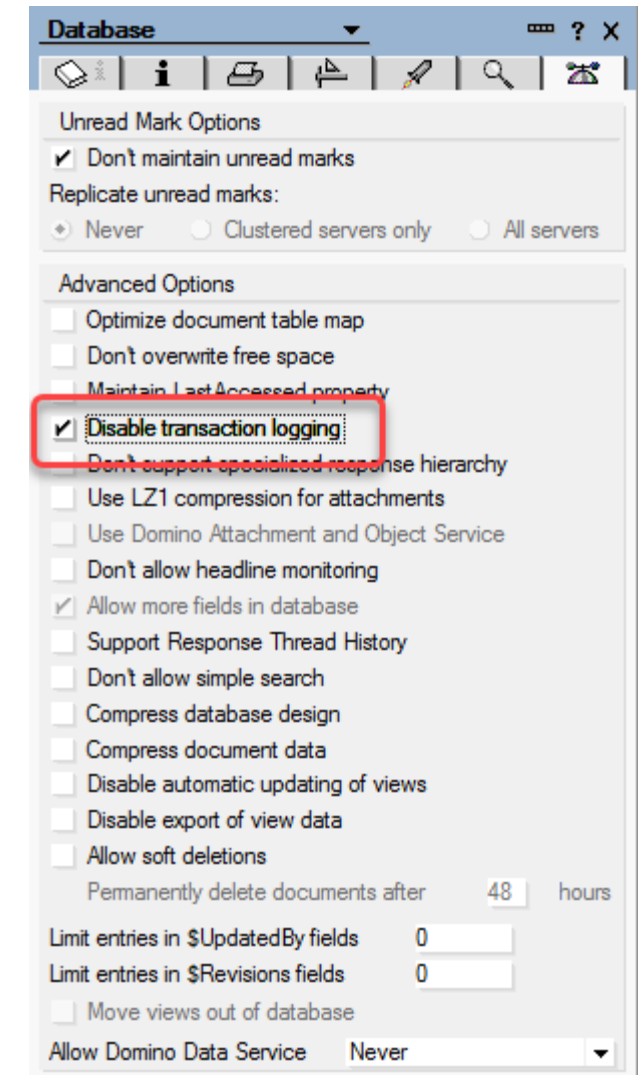

Not available on the client

Transaction logging must be enabled on the application

transactionRollback and transactionCommit can be called only after transactionBegin

```
Sub createDocument
  Dim s As New NotesSession
  Dim db As NotesDatabase
  Dim doc As NotesDocument

  Set db = s.Getdatabase( "serv04", "transact.nsf")
  Call db.Transactionbegin()

  Set doc = db.Createdocument()
  Call doc.replaceItemValue( "Form", "Memo")
  Call doc.replaceItemValue( "Subject", "TestDoc")
  Call doc.save(True, False)

  'Call db.Transactioncommit()
  Call db.Transactionrollback()
End Sub

New properties to support HCL Nomad

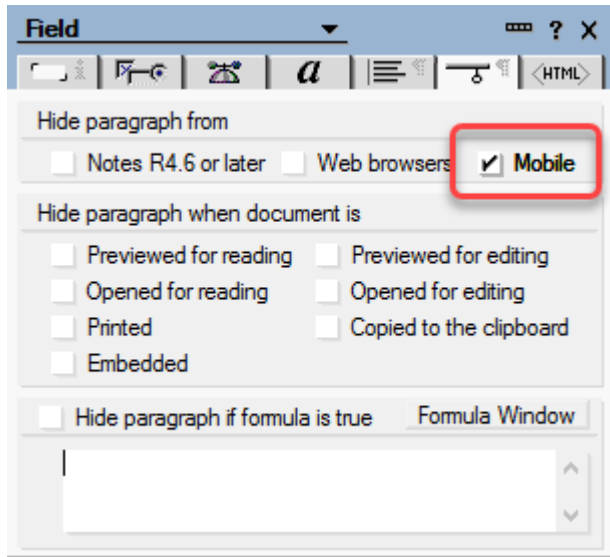

New properties are available in Domino® Designer to support applications that are used with the mobile client HCL Nomad.

These features are supported as of Nomad for iOS 1.0.6 and Nomad for Android 1.0.

If a column in a view does not display well in a mobile client, you can hide it.

New properties to support HCL Nomad

Field

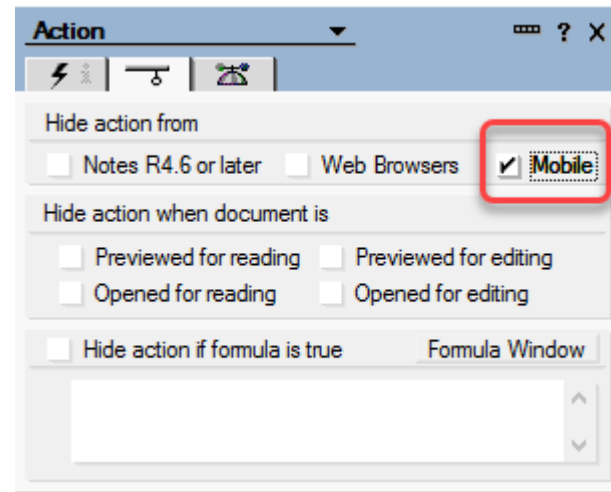

Hide paragraph from

☐ Notes R4.6 or later ☐ Web browsers ☒ **Mobile**

Hide paragraph when document is

☐ Previewed for reading ☐ Previewed for editing
☐ Opened for reading ☐ Opened for editing
☐ Printed ☐ Copied to the clipboard
☐ Embedded

☐ Hide paragraph if formula is true

Action

Hide action from

☐ Notes R4.6 or later ☐ Web Browsers ☒ **Mobile**

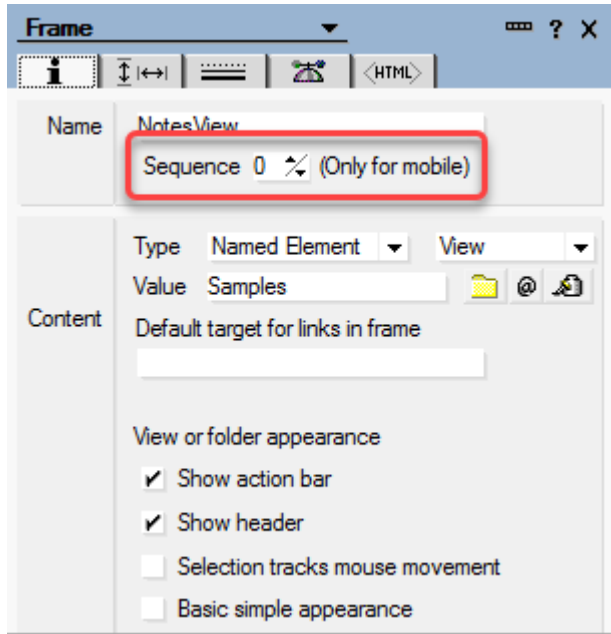

Hide action when document is

☐ Previewed for reading ☐ Previewed for editing
☐ Opened for reading ☐ Opened for editing

☐ Hide action if formula is true

If an **action** or a **field** does not display well in a mobile client, you can hide it.

New properties to support HCL Nomad

When there are **multiple frames** in an application, choose the **sequence** in which to navigate them in Nomad

New properties to support HCL Nomad

Action

Name: Close

Label: @

Target Frame:

Display

Type: Button

Value:

☒ Include action in Action bar

☐ Only show icon in Action bar

☐ Right align action control

☐ Include action in Action menu

☐ Include action in Mobile Actions button

☐ Include action in Mobile swipe left

☐ Include action in Mobile swipe right

Icon

Location: Left

Icon: a__disable.gif @

You can enable an action to be available in the **mobile actions button** in Nomad.

From the Action properties box, select Include action in Mobile Actions button.

For more information see Nomad documentation

https://help.hcltechsw.com/nomad/1.0/mobile_actions_menu_button.html

Hide columns or fields from smaller-resolution screens

The screenshot shows the Dom Designer interface. On the left, the 'Objects' pane lists various events, with 'Onsize' highlighted by a red box. The main area shows the 'animal (Form) : Onsize' event configuration, with the formula '@Command([RelayoutWindow])' entered. Below this, the 'Field' property window is open, showing the 'Hide paragraph if formula is true' checkbox checked, with the formula '@ResolutionHeight <= 200' entered. To the right, the 'Column' property window is also open, showing the 'Hide column if formula is true' checkbox checked, with the formula '@ResolutionWidth <= 200' entered. Both checkboxes and their respective formula fields are highlighted with red boxes.

https://help.hcltechsw.com/dom_designer/12.0.0/basic/wn_hide_columns_or_fields_from_smaller_screens.html

The new **onSize** event, **@RelayoutWindow** command, and **@ResolutionWidth** and **@ResolutionHeight** formulas allow you to hide **columns** and **fields** when they are displayed in smaller-resolution screens.

These new design elements are particularly useful for applications accessed through mobile devices with smaller screen size.

New in Domino Designer 12.0.1

What's new in Domino Designer 12.0.1?

The following features are new in HCL Domino Designer 12.0.1

New methods for DQL named results

The DominoQuery class includes a new method, execute, that returns the results of a query to named results in a database.

New method to saved sorted QRP results to a results view

The QueryResultsProcessor class includes a new method, ExecuteToView, that saves sorted results to a specialized results view in a database.

New methods for named documents

New methods are provided with the Database class to create and manage a new type of document referred to as a named document.

Ability to exclude fields from full-text search indexes

A new application property allows you to specify fields to exclude from full-text search indexing.

Larger database icons

Templates can have database icons that are up to 64x64 pixels in size.

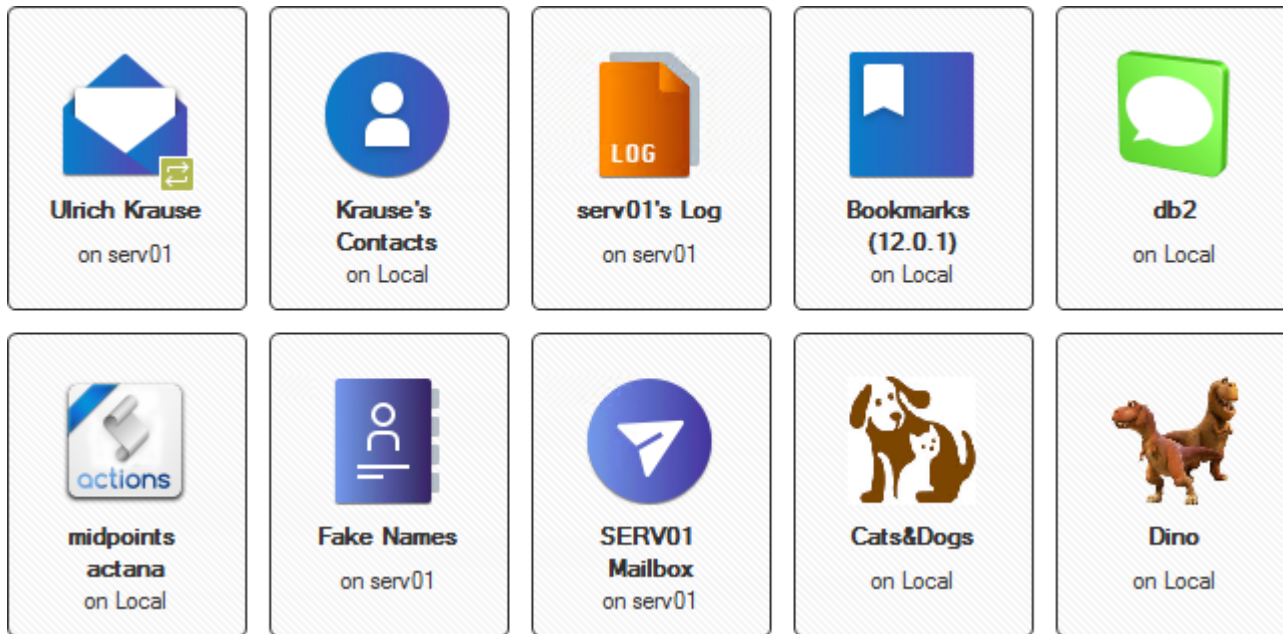

UseDoubleAsPointer method for Notes session class

This new method for the LotusScript Notes session class lets you use a Double to handle a 64-bit pointer argument for a C API call.

Database comparison tool

A new application template, CompareDBs Reports (comparedbs.ntf), installed on the Domino 12.0.1 server, can be used to compare two database designs and/or document contents or to analyze the design of one database.

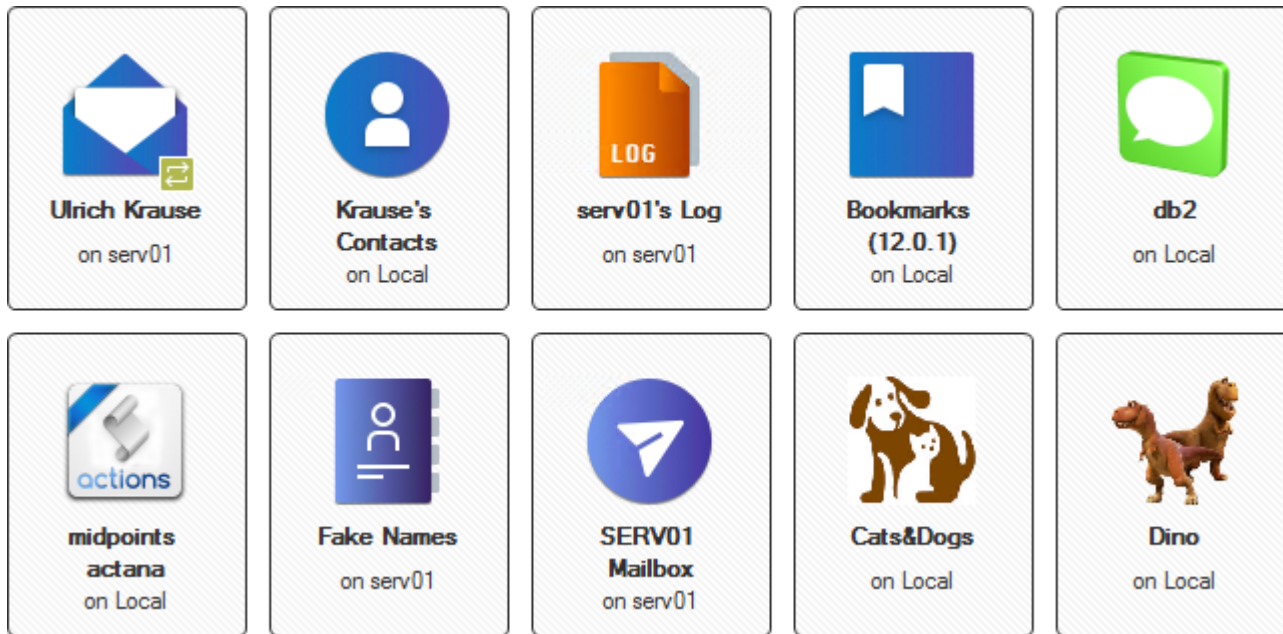

Larger Database Icons

Templates can have database icons that are up to 64x64 pixels in size.

Previously, database icons could be a maximum of 32x32 pixels.

Larger Database Icons

Templates can have database icons that are up to 64x64 pixels in size.

Previously, database icons could be a maximum of 32x32 pixels.

Pimp Your Client (Icon Set Database Download)
– Anett Hammerschmidt –

<https://noteshexe.de/new-feature-hcl-notes-12-01/>

https://help.hcltechsw.com/dom_designer/12.0.0/basic/wn_template_with_larger_application_icons.html

```
session.UseDoubleAsPointer = True

Print "Calling OSMemAlloc with size, setting active", dwDWordOne
wWordOne = OSMemAlloc(wWordTwo, dwDWordOne, dwDWordTwo)

If(wWordOne = 0) Then
    Print "OSMemAlloc worked, continuing with handle", dwDWordTwo
    dRetDouble = OSLockObject(dwDWordTwo)
    If(dRetDouble > 0) Then
        Print "OSLockObject worked, calling XXX"

        OSUnlockObject(dwDWordTwo)
    Else
        Print "OSLockObject failed"
    End If
    Print "Freeing memory"
    wWordOne = OSMemFree(dwDWordTwo)
End If

session.UseDoubleAsPointer = False
```

Allows to use a Double to handle a 64-bit pointer argument for a C API call.

A workaround was previously available through the Domino notes.ini setting **LS64BITCCALLOUTPointerSupport=1**.

However, the notes.ini approach had the downside of applying to **all** LotusScript agents on the server.

Named Documents

New methods are provided with the Database class to create and manage a **new type** of document referred to as a named document.

A named document has a **name** rather than a **NoteID** and does not appear in the Notes client or in any view.

A named document is designed for programmatic access and is a functional **replacement** for profile documents which have been used previously.

db.getNamedDocument(String Name, Optional String username) As NotesDocument

https://help.hcltechsw.com/dom_designer/beta/12.0.1/basic/H_GETNAMEDDOCUMENT_METHOD.html

```
Dim ss As New NotesSession
Dim db As NotesDatabase
Dim named As NotesDocument
```

```
Const userName = ".ulrich.krause;"
Const namedDocName = "named1,,,,... ..doc"
```

```
Set db = ss.CurrentDatabase
Set named = db.getNamedDocument(namedDocName, userName)
Call named.replaceItemValue("someItem", "someValue2")
'Call named.save( True, False)
```

```
MsgBox named.Nameofdoc           Agent Manager: Agent message: named1,,,,... ..doc
MsgBox named.Usernameofdoc       Agent Manager: Agent message: .Ulrich.Krause;
MsgBox named.someItem(0)         Agent Manager: Agent message: somevalue2
```

For related LotusScript documentation, see the following topics:

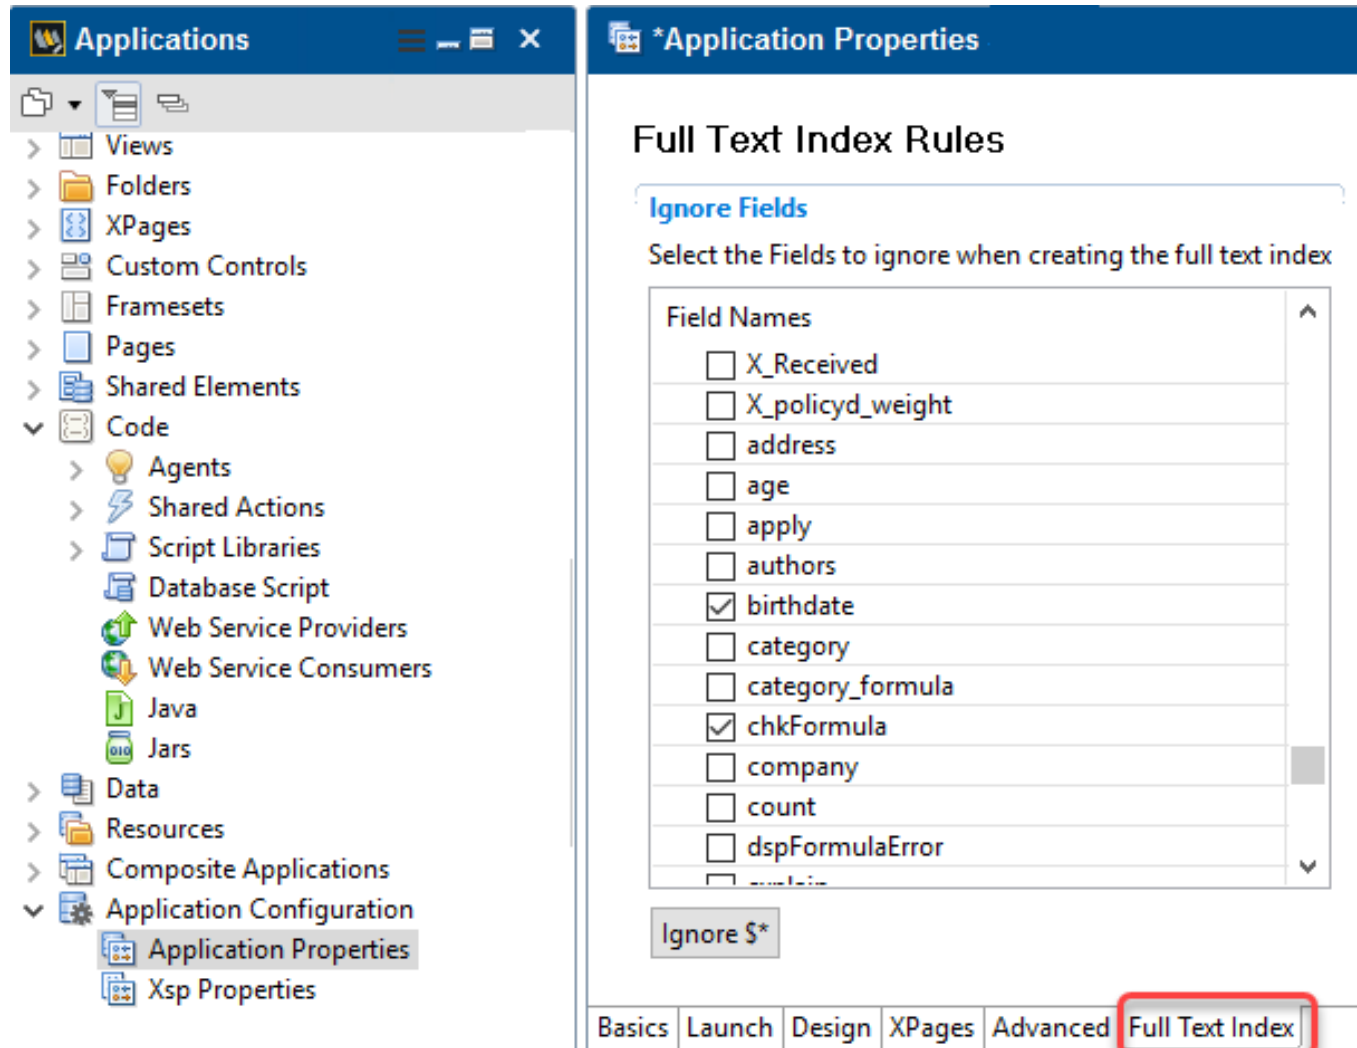

- [GetNamedDocument \(NotesDatabase - LotusScript\)](#)
- [GetNamedDocumentCollection \(NotesDatabase - LotusScript\)](#)
- [IsNamedDoc \(NotesDocument - LotusScript\)](#)
- [IsNewNote \(NotesDocument - LotusScript\)](#)
- [NameOfDoc \(NotesDocument - LotusScript\)](#)
- [UserNameOfDoc \(NotesDocument - LotusScript\)](#)

https://help.hcltechsw.com/dom_designer/beta/12.0.1/basic/wn_nameddocumentmethods.html

For related Java documentation, see the following topics:

- [getNamedDocument \(Database - Java\)](#)
- [getNamedDocumentCollection \(Database - Java\)](#)
- [IsNamedDoc \(Document - Java\)](#)
- [IsNewNote \(Document - Java\)](#)
- [getNameOfDoc \(Document - Java\)](#)
- [getUserNameOfDoc \(Document - Java\)](#)

Exclude fields from full-text search indexes

To generate more useful full-text search results and to **save space**, you can exclude fields in an application that aren't relevant for full-text searches.

Add **FT_DEBUG_DISABLE_DB_RULES=0** to the server notes.ini. You must **restart the server** for the change to take effect.

Exclude fields from full-text search indexes

The screenshot shows the 'Application Properties - faker' dialog box, specifically the 'Full Text Index Rules' tab. The 'Ignore Fields' section is active, showing a list of field names with checkboxes. The 'Form' field is checked, indicating it is to be ignored. Below the list is an 'Enable \$*' button.

Full Text Index Rules
Select the Fields to ignore when creating the full text index

Field Names
<input checked="" type="checkbox"/> Form
<input checked="" type="checkbox"/> IconBitmap
<input checked="" type="checkbox"/> OfficeAddress
<input checked="" type="checkbox"/> OfficeAddressSecondary
<input checked="" type="checkbox"/> birthday
<input checked="" type="checkbox"/> companyName
<input checked="" type="checkbox"/> country
<input checked="" type="checkbox"/> firstName
<input type="checkbox"/> idNumber
<input checked="" type="checkbox"/> lastName
<input checked="" type="checkbox"/> nyseSymbol

Enable \$*

The right pane shows a tree view of the application structure, including folders like 'Access Control List', 'Designs', 'Framesets', 'Pages', 'Forms', 'Views', 'Folders', 'Navigators', 'Agents', 'Images', 'Applets', 'Web Services Providers', 'Web Services Consumers', 'Java', 'Jars', 'Subforms', 'Shared Fields', 'Script Libraries', and 'Others'.

The bottom pane shows a table of loaded rows:

Icon	Name	Nu...	Sequ...	Dupl...	Index	Val
	\$FTRules	11	2	0	3	[1]
	\$Name	1	2	0	1	\$F
	\$UpdatedBy	1	2	0	2	CM

Rows Loaded: 3 | Rows Displayed: 3 | Rows Selected: 1

The 'Note Info' tab is selected, showing the 'Field Value' section. The 'Type' is set to '\$FTRules' and the 'Name' is set to '\$FTRules'. The text area contains the following rules:

```
IGNORE FIELDNAME $*  
IGNORE FIELDNAME firstName  
IGNORE FIELDNAME country  
IGNORE FIELDNAME companyName  
IGNORE FIELDNAME birthday  
IGNORE FIELDNAME OfficeAddressSecondary  
IGNORE FIELDNAME OfficeAddress  
IGNORE FIELDNAME IconBitmap  
IGNORE FIELDNAME Form  
IGNORE FIELDNAME nyseSymbol  
IGNORE FIELDNAME lastName
```

AMgr: Start executing agent 'qry' in 'ftdemo.nsf'

Agent Manager: Agent printing: initial query.

Full Text message: Index does not exist. (No such file or directory)

Agent Manager: Agent error: at lotus.domino.NotesThread.run(Unknown Source)

AMgr: Agent 'qry' in 'ftdemo.nsf' completed execution

DOTS

OSGi (Open Service Gateway Initiative) is a Java framework for developing and deploying modular software programs and libraries.

The OSGi framework provides a dynamic modular architecture which has been used in many applications such as Eclipse Equinox, Apache Felix, etc.

Modularity enables programmers to do functionality testing in isolation and engage in parallel development efforts during a given sprint or project. This increases efficiency throughout the entire software development life-cycle.

OSGi is only a thin runtime that governs how bundles are loaded/stopped (lifecycle), their dependencies, how their services are exposed, etc.

<https://www.osgi.org>

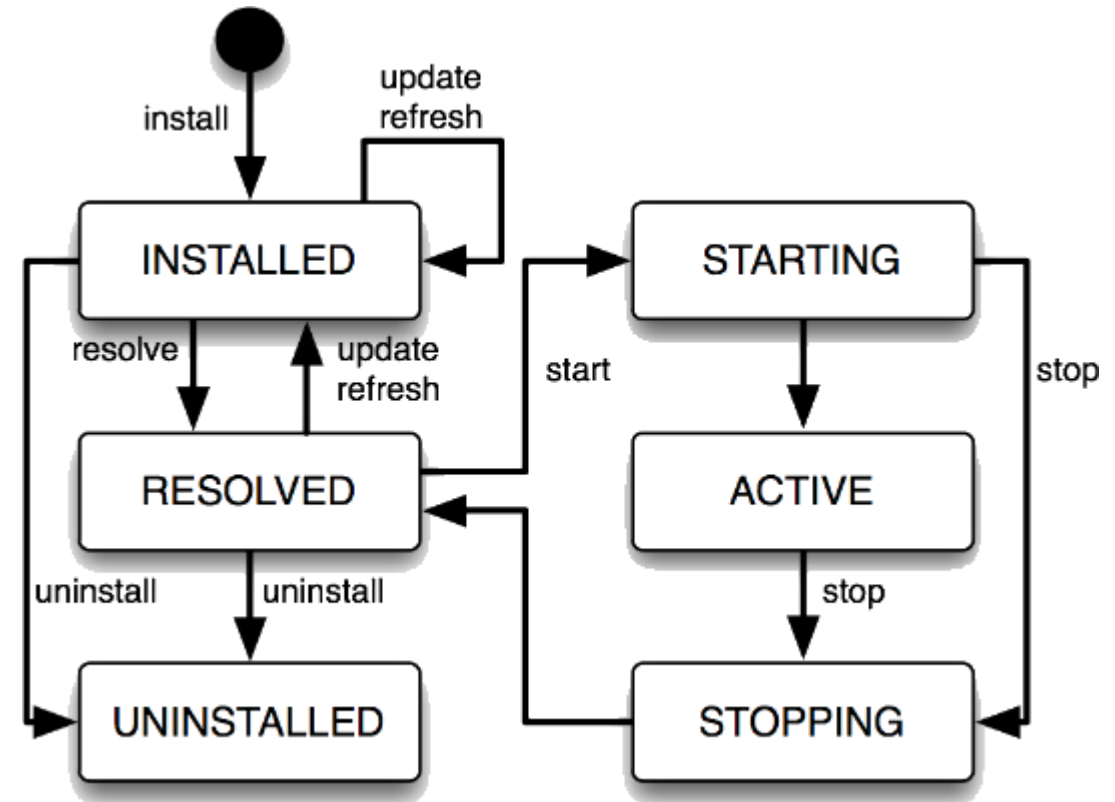

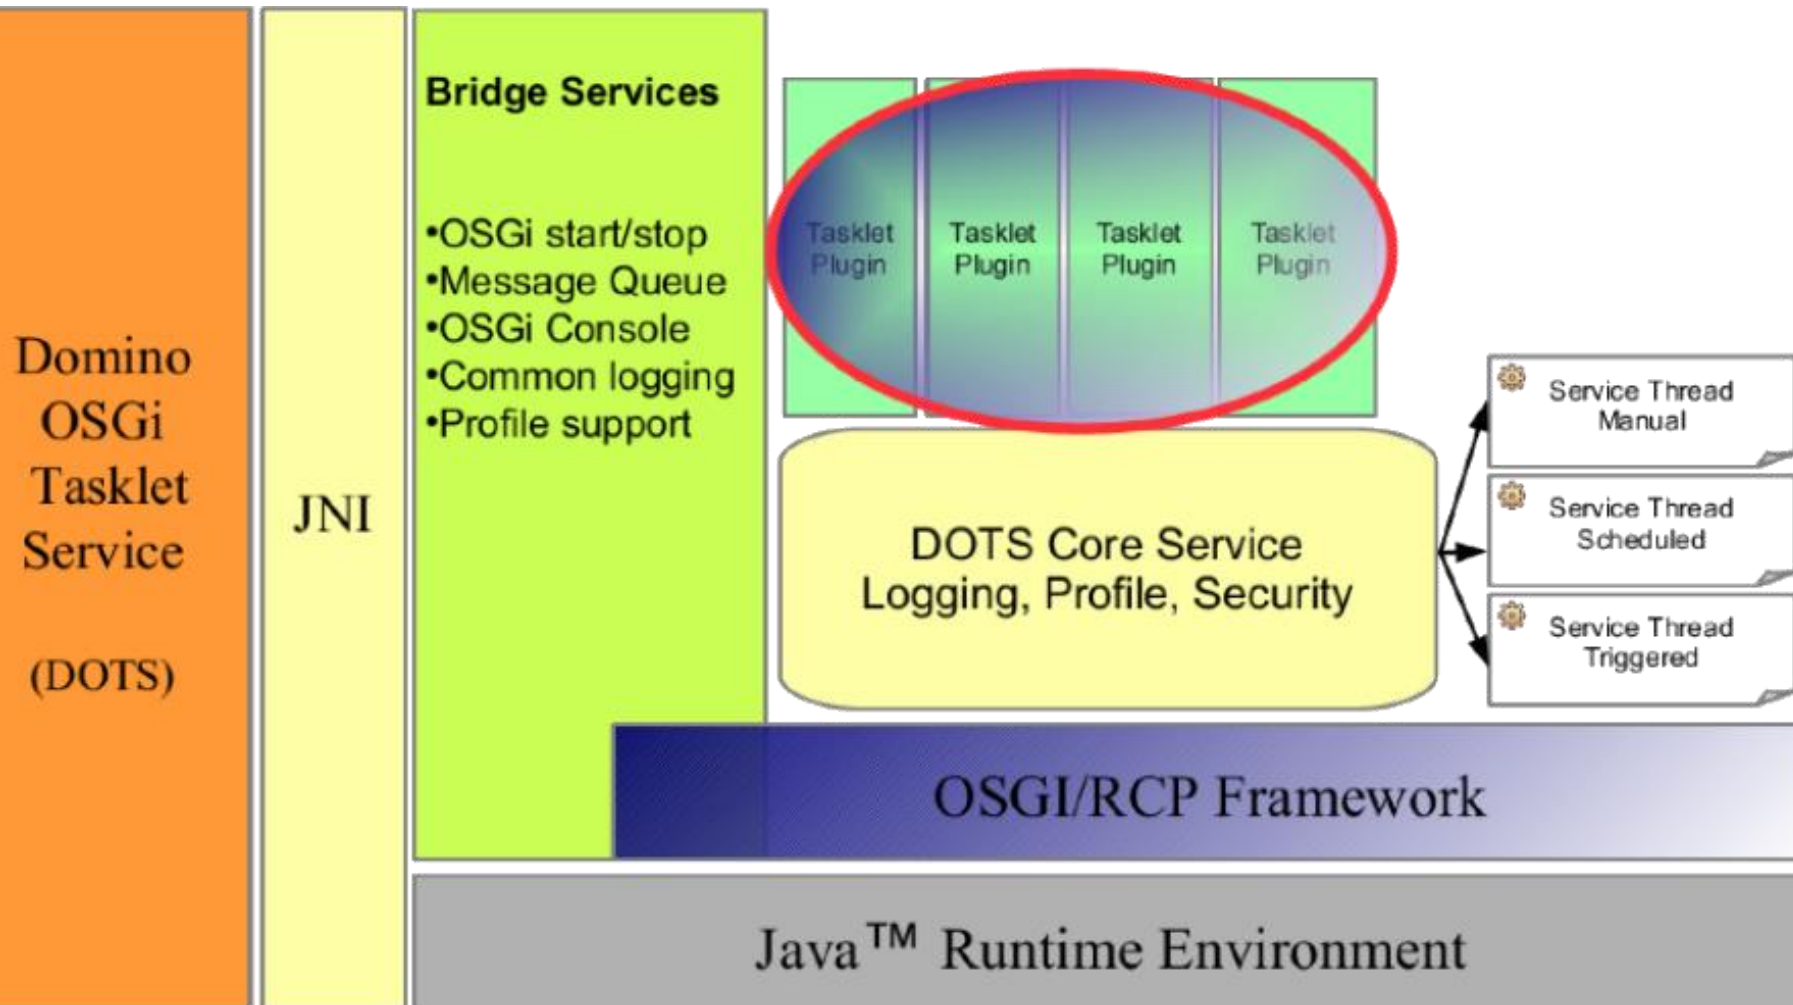

In OSGi, a single component is called a **bundle**.

Logically, a bundle is a piece of functionality that has an independent lifecycle – which means it can be started, stopped and removed independently.

Technically, a bundle is just a jar file with a MANIFEST.MF file containing some OSGi-specific headers.

A bundle can require other bundles and export packages that can be accessed by other OSGi components.

DOTS is a generic Domino add-in task that lets users create Domino server tasks by creating a tasklet container using Java OSGi plugins.

A **tasklet** is a lightweight server add-in task written in Java and declared as an OSGi extension point.

Domino Server task **ndots.exe** installed at {dominobin} directory. Launches a JVM and invokes code located in launcher.jar to launch the OSGi container.

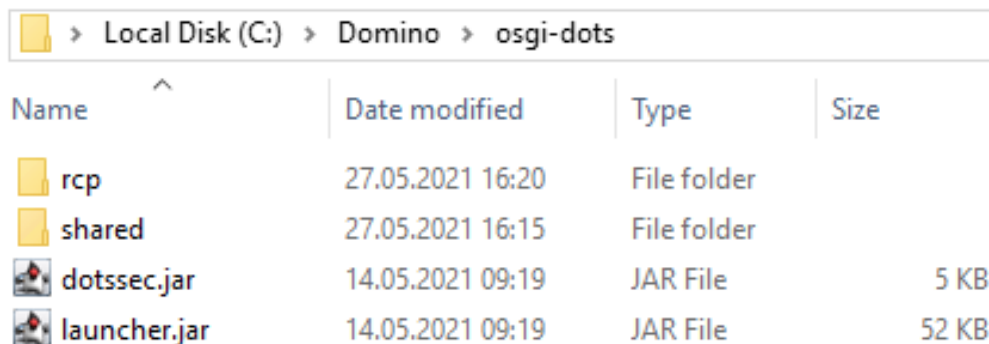

The **OSGi framework** located in {dominobin}/osgi-dots/rcp/eclipse contains the core plugins to run the OSGi framework.

The **com.ibm.dots** plugin located in {dominobin}/osgi-dots/shared/eclipse/plugins, is part of the DOTS framework. This plugin is essential to communicate between the DOTS server task and the server tasklet plugins.

Domino Extension manager library dotsextmgr.dll installed at {dominobin} directory. Responsible for posting the events to the tasklet container for further processing by the triggered tasklets.

dotssec.jar file installed at {dominobin}/osgi-dots directory acts as a DOTS security hook.

launcher.jar file installed at {dominobin}/osgi-dots directory. Responsible for launching the OSGi framework.

Name	Date modified	Type	Size
rcp	27.05.2021 16:20	File folder	
shared	27.05.2021 16:15	File folder	
dotssec.jar	14.05.2021 09:19	JAR File	5 KB
launcher.jar	14.05.2021 09:19	JAR File	52 KB

Multi platform support

Built-in mechanism to access server task user arguments.

Command line options.

Easy deployment. Just drop a single .jar file into the file system.

Tasklet run in the context of the server. **No design element signing** needed.

No limitations like in the Agent Manager. DOTS tasks can run every second and as long as needed.

Better tooling with Eclipse IDE and its first-class Java and plugins editors and Java.

Source Control Management.

Shared bundles. Can be used in different plugins.

```
te dots travelerrules help
usage: tell DOTS travelerrules [-a] [-apns] [-c] [-cr <--dry-run>] [-dd
    <deviceId>] [-dj <form>] [-h] [-il] [-l <level>] [-ma] [-mail]
    [-mdm] [-t] [-u]

Command line options and arguments:

-a,--about                Prints version of this application
-apns,--check-apns        Checks APNS certificate expiration
-c,--cleanup              Forces the periodic cleanup
-cr,--cleanup-rules <--dry-run> Runs cleanup of orphan rules
-dd,--dumpdevice <deviceId> Dumps device information
-dj,--deletejobs <form>   Deletes all documents with a given form
-h,--help                 Shows this screen
-il,--inetlockout         Checks InetLockOutDb and updates user
                           documents
-l,--loglevel <level>     Changes the log level during runtime
-ma,--maintenance        Forces the maintenance task to cleanup
-mail,--mail              Sends a test mail to the configured
                           recipients. Uses mail sender from basic
                           configuration
-mdm,--mdmupdate          Executes MDM update
-t,--timecontrol          Forces the timecontrol task
-u,--update               Forces the periodic device update

Visual Studio Code

<https://code.visualstudio.com>

<https://www.jetbrains.com/idea/>

```
package de.eknori.osgi.hello;

import org.osgi.framework.BundleActivator;

public class Activator implements BundleActivator {

    private static BundleContext context;

    static BundleContext getContext() {
        return context;
    }

    public void start(BundleContext bundleContext) throws Exception {
        Activator.context = bundleContext;
    }

    public void stop(BundleContext bundleContext) throws Exception {
        Activator.context = null;
    }

}
```

```
package de.eknori.osgi.hello;

import org.eclipse.core.runtime.IProgressMonitor;

public class HelloWorld extends AbstractServerTask {
    public HelloWorld() {

    }

    @Override
    public void dispose() throws NotesException {
        logMessage("BYE WORLD!!");
    }

    @Override
    public void run(RunWhen arg0, String[] arg1, IProgressMonitor arg2) throws NotesException {
        logMessage("HELLO WORLD!");
    }
}
```

```
<?xml version="1.0" encoding="UTF-8"?>
<?eclipse version="3.4"?>
<plugin>
    <extension
        point="com.ibm.dots.task">
        <task
            class="de.eknori.osgi.hello.HelloWorld"
            id="de.eknori.osgi.hello.helloworld"
            runOnStart="true">
        </task>
        </extension>
    </plugin>
```

To launch the DOTS container, use the following command from the Domino serverconsole: „**load dots**” and to stop a running DOTS container use „**tell dots quit**”.

The JVM loaded by DOTS supports **JavaOptionsFile** notes.ini setting for any user-specific JVM options.

The JVM loaded by DOTS uses the **default max and min** heap values of 1024MB and 64MB respectively.

You can customize heap size values by using the notes.ini setting **DOTSJavaMaxHeapSize** and **DOTSJavaMinHeapSize**. For example:

```
DOTSJavaMinHeapSize =128M
```

```
DOTSJavaMaxHeapSize = 2048M
```

The following notes.ini variables from prior versions of DOTS **are no longer available** in Domino V12

```
DOTS_DEBUGADDRESS
```

```
DOTS_DEBUGSUSPEND
```

```
DOTS_JavaOptionsFile
```

```
// =====  
// notes.ini  
// =====
```

```
JavaOptionsFile=d:/domino/data/javaoptions.txt
```

<https://www.eknori.de/2021-06-04/load-jdbc-sql-driver-at-runtime-in-dots-and-amgr/>

```
// =====  
// javaOptions.txt  
// =====
```

```
-Duser.country=US  
-Duser.language=en  
-Djava.security.manager -Djava.security.policy=./data/custom.policy
```

```
// =====  
// custom.policy file added at runtime  
// -Djava.security.manager -Djava.security.policy=custom.policy  
// =====
```

```
grant {  
    permission java.lang.RuntimePermission "getClassLoader";  
    permission java.lang.RuntimePermission "setContextClassLoader";  
    permission java.lang.RuntimePermission "accessDeclaredMembers";  
    permission java.lang.reflect.ReflectPermission "suppressAccessChecks";  
};
```

To remote debug the DOTS tasklet application, use the following notes.ini settings, which are the same used for other Java applications

```
JavaEnableDebug=1
```

```
JavaDebugOptions=transport=dt_socket,server=y,suspend=n
```

The address should be the random port allocated by the JVM.

Adding address attribute (e.g. address=8000) in JavaDebugOptions may interfere with other JVM load and **will** lead to a crash.

The issue is being tracked under **SPR# NBALC3LAVJ**

Simple actions & @formula

No way. But such agents do not have complex code. It should be easy to rewrite them in Java

LotusScript

As with agents, LotusScript cannot be transferred to DOTS. LotusScript classes have equivalent Java classes and the code can be rewritten.

Java

HCL Domino OSGi Tasklet Service (DOTS)

📅 16d ago • 👁 193 Views • ★★★★★

Applies to

HCL Domino 12.0

Introduction

The Domino OSGi Tasklet Service (DOTS) is available again in HCL Domino 12. See the documentation for complete details.

[Domino OSGi Tasklet Service \(DOTS\) Documentation](#)

[Copy Permalink](#)

https://support.hcltechsw.com/csm?id=kb_article&sysparm_article=KB0089518&sys_kb_id=2f2251911b9b249ca2f48661cd4bcbba

QueryResultsProcessor

NotesQueryResultsProcessor

```
+AddCollection()  
+AddDominoQuery()  
+AddFormula()  
+AddColumn()  
+ExecuteToJson()
```

Contained by NotesDatabase

Aggregates, computes, sorts, and formats collections of Documents

```
Dim session As New NotesSession  
Dim db As NotesDatabase  
  
Set db = session.Currentdatabase  
  
Dim qrp As NotesQueryResultsProcessor  
Set qrp = db.CreateQueryResultsProcessor()
```

addCollection()

```
Dim session As New NotesSession
Dim db As NotesDatabase
Dim qrp As NotesQueryResultsProcessor
Dim ndc As NotesDocumentCollection
Set db = session.CurrentDatabase
Set qrp = db.CreateQueryResultsProcessor()

Call qrp.AddCollection(_
db.AllDocuments, "coll_01")

Call qrp.AddDominoQuery(_
db.CreateDominoQuery(), "@All", "coll_02")

Call qrp.AddCollection(_
db.getView("all").AllEntries, "coll_03")

Set ndc = db.Ftsearch("animal", 5000)
Call qrp.AddCollection(ndc, "coll_04")

Set ndc = db.Search("/"bird" *= species/, nothing, 0)
Call qrp.AddCollection(ndc, "coll_05")
```

Adds a NotesDocumentCollection or NotesViewEntryCollection to the Documents being processed

Unique name for result set required

```
Set qrp = db.CreateQueryResultsProcessor()
```

```
Call qrp.AddCollection(  
db.Alldocuments, "rslt_1")
```

```
Call qrp.AddDominoQuery(  
db.Createdominoquery(), "@All", "rslt_1")
```

A unique name (to the **QueryResultsProcessor** instance) of the input collection is required

```
Dim session As New NotesSession
Dim db As NotesDatabase
Dim dq As NotesDominoQuery
Dim qrp As NotesQueryResultsProcessor
Dim nav As NotesJSONNavigator
```

```
Set db = session.CurrentDatabase
```

```
Set dq = db.CreateDominoQuery()
```

```
Set qrp = db.CreateQueryResultsProcessor()
```

```
Call qrp.AddDominoQuery(dq, QRY_ALL_CATS_AND_DOGS, "qrp_dq")
```

```
Call qrp.AddColumn("name", "", "", SORT_ASCENDING, False, False)
```

```
Set nav = qrp.Executetojson()
```

```
json = nav.Stringify()
```

Processes the input collections in the manner specified by the Sort Columns, overriding field values with formulas specified via addFormula calls, and returns JSON output to a NotesJsonNavigator object.

The JSON syntax produced by QueryResultsProcessor execution conforms to **JSON RFC 8259**

```
{
  "StreamResults": [
    {
      "@nid": "NT00000090A",
      "@DbPath": "c:\\Notes\\Data\\animals.nsf",
      "name": "Garfield"
    },
    {
      "@nid": "NT0000008FA",
      "@DbPath": "c:\\Notes\\Data\\animals.nsf",
      "name": "Lassie"
    },
    {
      "@nid": "NT0000008F6",
      "@DbPath": "c:\\Notes\\Data\\animals.nsf",
      "name": "Boomer"
    }
  ]
}
```

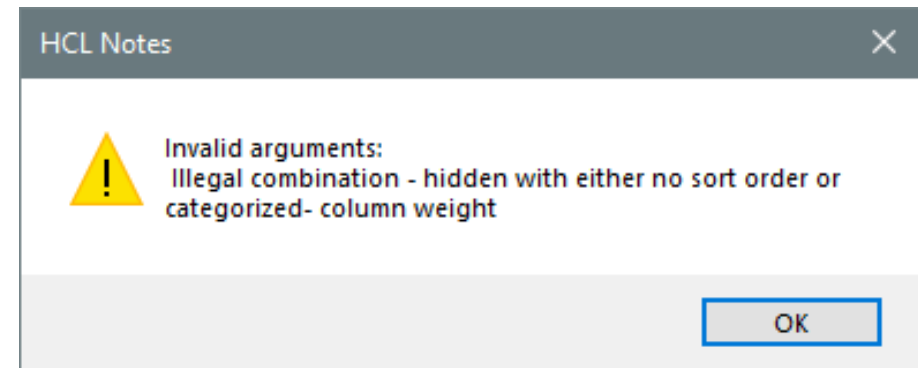

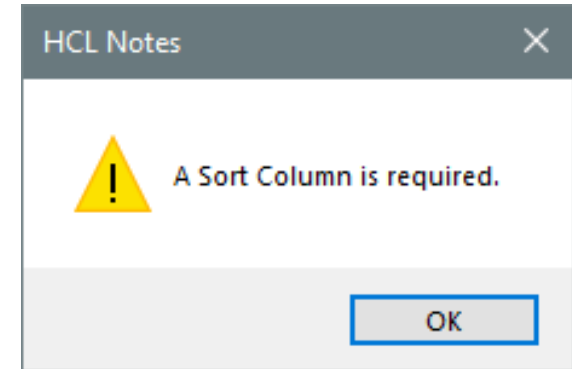

Special keys “@nid” for NoteID and “@DbPath” are output so results can be acted upon on a document basis. All results are output under the “**StreamResults**” top element key.

addColumn()

```
Set qrp = db.CreateQueryResultsProcessor()  
Call qrp.AddDominoQuery(_  
dq, QRY_ALL_CATS_AND_DOGS, "cats_dogs")  
Call qrp.Addcollection(_  
dbBirds.Alldocuments, "birds")
```

```
'Call qrp.AddColumn("name", "", "", SORT_ASCENDING, False, False)  
'Call qrp.AddColumn("name", "", "", SORT_ASCENDING)  
'Call qrp.AddColumn("name", , , SORT_ASCENDING)  
Call qrp.AddColumn("name")
```

```
Call qrp.AddColumn("weight", , , , True)
```

Method: AddFormula()

Provides Domino formula language to **override the data** used to generate values for a particular sort column and an input collection or set of collections.

Since input collections can be created from different databases, **design differences** can be adjusted using addFormula() to **produce homogenous values** in the output

Design difference

Cats&Dogs

      "@DbPath": "c:\\Notes\\Data\\animals1.nsf",
      "displayName": "Garfield"
    }
  ]
}
```

Method: AddFormula()

```
Dim session As New NotesSession
Dim db As NotesDatabase

Set db = session.Currentdatabase

Dim qrp As NotesQueryResultsProcessor
Set qrp = db.CreateQueryResultsProcessor()
Call qrp.Addcollection(db.Alldocuments, "rslt_1")

Call qrp.AddColumn("costcenter")
Call qrp.AddFormula(_
    /@DbLookup("");"";"costcenter";10;"costcenter")/, _
    "costcenter", "rslt_1")

Call qrp.AddFormula(_
    |@if(costcenter="10";"DOGHOUSE";"OTHER")|, _
    "costcenter", "rslt_1")
Call qrp.AddColumn("name")
```

```
{
  "@nid": "NT000008FE",
  "@DbPath": "c:\\Notes\\Data\\animals1.nsf",
  "costcenter": "OTHER",
  "name": "Garfield"
},
{
  "@nid": "NT000008FA",
  "@DbPath": "c:\\Notes\\Data\\animals1.nsf",
  "costcenter": "DOGHOUSE",
  "name": "Lassie"
},
```

I cannot get your @lookup formula language syntax working anywhere. Debugging is hard due to Damien Katz' love affair with abstraction.

<http://damienkatz.net/2005/01/formula-engine-rewrite.html>

Use formula Language in DQL – search terms

```
Dim session As New NotesSession
Dim db As NotesDatabase

Set db = session.Currentdatabase

Dim coll As NotesDocumentCollection
Dim dq As NotesDominoQuery
Set dq = db.Createdominoquery()
Set coll = dq.Execute(/_
    @fl('Form="animal"') And
    @fl('"cat": "dog" *= species')_
/)

Dim qrp As NotesQueryResultsProcessor
Set qrp = db.CreateQueryResultsProcessor()
Call qrp.AddCollection(coll, "rslt_ndc")

Call qrp.AddColumn("subject", "", "", SORT_DESCENDING, False, True)
Call qrp.AddColumn("name")
```

Beginning in HCL Domino® 12, Formula Language can be used in Domino Query Language (DQL) search terms.

Formula Language provides full expression handling, intra-document field searches, and the ability to leverage an extensive library of @function calls.

Use the **@FL** (or **@FORMULA**, **case insensitive**) clause to encapsulate Formula Language syntax within DQL terms.

New methods for DQL named results

```
Session session = getSession();
DominoQuery dominoQuery = null;
DocumentCollection coll = null;
DocumentCollection coll2 = null;

Database sourceDb = session.getCurrentDatabase();
sourceDb.removeAllQueryNamedResults();

dominoQuery = sourceDb.createDominoQuery();
dominoQuery.setMaxScanDocs(Integer.MAX_VALUE);
dominoQuery.setMaxScanEntries(Integer.MAX_VALUE);

String query = "idNumber > 20 AND idNumber < 30";
coll = dominoQuery.execute(query, "named_rslt_1");

for (int i = 21; i < 30; i++) {
    query = String.format("in ('named_rslt_1') and idNumber = %d", i);
    coll2 = dominoQuery.execute(query);
}
```

Executes a query string passed in according to set parameters and **returns named results** in a database where they can be accessed again more quickly.

For **reuse** of complex queries, this saves significant processing time.

Aggregate function names begin with **double @@** signs and are case insensitive.

They cannot be nested one within another.

Their numeric output can be either integer or floating-point values.

@@avg(colname) Returns the sum all values of col1 within the current category divided by the number of documents.

@@sum(colname) Returns the sum of all values of col2 within the current category.

@@max(colname) Returns the maximum numeric value of col3 within the current category.

@@min(colname) Returns the minimum numeric value of col4 within the current category.

@@count() Returns the count of documents within the current category

If Not vwRslt Is Nothing Then Call vwRslt.Remove()

Set vwRslt = qrp.executeToView(RSLT_VIEW, 2, theReaders)
```

Saves sorted QueryResultsProcessor results to a "results view" in a database.

Processes the input collections in the manner specified by the Sort Columns, overriding field values with formulas specified via addFormula calls.

Creates a results view in a host database and returns View object.

Results views are generated programmatically, so they are designed to be discarded after use.

Results views contain unique NoteIDs that cannot be referenced.

Security for results views is implemented at the view level.

In line with SPR # MAVACCJG6J, a fix for that issue has been identified. It is subject to changes, but it has been submitted to version 12.0.2.

If you need an immediate fix, just let me know so I can request for a hotfix. – HCL support -

- AddCombineRule (left programmatic name, rule, right programmatic name)
 - Prior to sort or view create, combine data using the sort columns (with applied formulas) using the specified rule (or method)
 - “Join” is the most familiar rule type, also keyword lookup ++
- SetOutputType (type, viewname, streamtype)
 - View (with name) or stream (with streamtype)
- Execute (run the result processor)

A close-up photograph of a hand placing a white puzzle piece into a larger orange puzzle piece. The white piece is labeled 'ANSWER' in orange capital letters, and the orange piece is labeled 'QUESTION' in white capital letters. The puzzle is composed of many white pieces, with one orange piece standing out. The hand is visible in the top left corner, with the thumb and index finger holding the white piece.

ANSWER

QUESTION

[illegible]

A word cloud featuring the phrase "Thank You" in numerous languages. The words are arranged in a circular pattern, with "thank you" in the center in a large, bold, red font. Other prominent words include "gracias" in green, "danke" in blue, "merci" in orange, and "arigatō" in pink. Smaller words in various colors and fonts surround the central text, creating a vibrant and multicultural visual. The background is white, and the words are of different sizes, with the largest being the most central.
